D-Subminiature Connectors

Key Markets & Applications

Invented by Cannon engineers in 1952 for aircraft radio systems, the D-Subminiature was designed as a smaller, lightweight rectangular alternative to larger, heavier connectors of the time. Today, Cannon continues its legacy of innovation through highly engineered D-Sub connector styles, sizes, configurations and accessories. From rocket launchers and telecommunications, to avionics and high-speed rail, its performance, reliability and versatility have made this Cannon invention one of the most widely used connectors in the world.

Space & Satellites

Military Vehicles

Commercial Avionics

D*M, D*MM, D*MA with NM, NMB option connectors are used when non magnetic characteristics are required.

Hermetic Military D connectors are designed to meet environmental conditions of extreme pressure differential.

These high reliability D-Sub connectors are the finest quality and are qualified to MIL-DTL-24308.
